

# IT351: Human Computer Interaction

## Lab Assignment 4

### Personalised Voice Assistant

**Name:** Chinmayi C. Ramakrishna  
**Roll No.:** 181IT113

**Date of Submission:** 22<sup>nd</sup> February, 2021

---

#### Objective:

1. To understand the speech to text and text to speech.
2. To understand the android app development using MIT app inventor.
3. To design and develop the HCI applications using the guidelines.

The following guidelines have been applied in the application:

- 1. Strive for Consistency**

A consistent central justification has been followed throughout the application.

- 2. Cater to Universal Usability.**

Speak keyword has been used which can be interpreted as a voice command by the user.

- 3. Offer Informative feedback.**

Provides feedback in case of errors.

- 4. Prevent Errors.**

Prevents errors by providing feedback and leniency to users.

- 5. Permit easy reversal of actions.**

Actions can be reversed by recording the voice command.

- 6. Support internal locus of control.**

The user can control the voice and also summon speech with customised texts.

- 7. Reduce short term memory load.**

Doesn't require the user to remember anything.

- 8. Simplify task structure.**

The application is simple to use and in terms of visuals and has a minimalistic design.

- 9. Documentation and Help.**

Provides a Help button to know about the voice assistant.

The application has 17 voice commands with 10 questions, 6 normal conversational voice commands and 1 action to open the camera. Unknown questions are redirected to the browser.

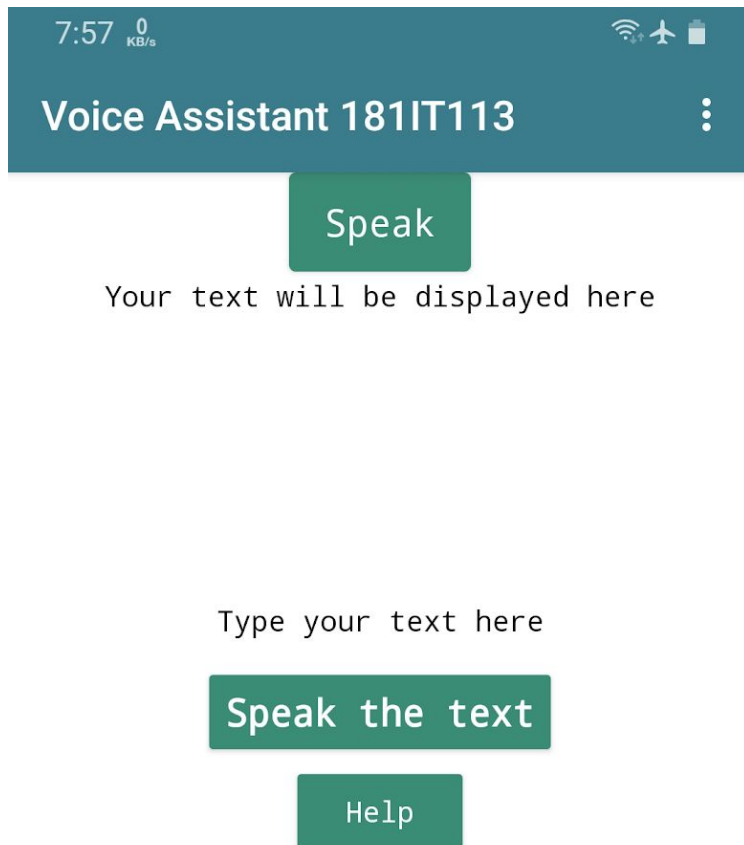

Fig 1. Home Screen
